To: All North Carolina Health Care Providers From: Megan Davies, MD, State Epidemiologist

Re: 2014–15 Influenza Season: Testing Update for NC Clinicians

This memo provides guidance to NC clinicians and information regarding testing for influenza. This guidance might change as the influenza season progresses; updated information is available at www.flu.nc.gov.

Specific information about diagnosis of novel influenza viruses such as H7N9 and H3N2v is covered in separate documents at www.flu.nc.gov.

TESTING

- Rapid influenza diagnostic test (RIDT) sensitivities are approximately 40–70% when compared with viral
 culture or reverse transcription polymerase chain reaction (RT-PCR). Therefore, a negative RIDT does
 NOT rule out infection and should not be used as a basis for treatment or infection control decisions
 during periods when influenza is known to be circulating. Additional information is available at
 http://www.cdc.gov/flu/professionals/diagnosis.
- Confirmatory influenza testing at the North Carolina State Laboratory of Public Health (SLPH) is primarily intended for virologic surveillance, rather than diagnostic purposes. This testing will focus on the following groups:
 - 1. A sample of patients with influenza-like illness seen at facilities participating in the Influenza-Like Illness Network (ILINet).
 - 2. Patients who die with influenza-like illness but have no laboratory evidence of influenza infection.
- Testing at SLPH can also be considered for other patients if the local health department determines that
 such testing is necessary for surveillance or to determine which control measures are needed. Examples
 include outbreaks in institutional settings, patients with recent swine exposure, and clusters of severe or
 unusual respiratory illness. Local Health Department approval is REQUIRED for testing at the State
 Laboratory of Public Health, with the exception of specimens submitted from ILINet providers. If testing
 cannot be performed at SLPH, it can be requested from commercial or hospital-based laboratories.
- Specific guidance regarding specimen collection and transport is available on the "Providers" tab at www.flu.nc.gov.

Health care providers should contact their Local Health Departments or the Communicable Disease Branch epidemiologist on-call 24/7 number (919-733-3419) for questions about influenza.

We will post updates with additional guidance as warranted on www.flu.nc.gov. Updates are also available from the CDC at www.cdc.gov/flu.
